

Interview Trainer Agent

Problem Statement

An Interview Trainer Agent powered by Retrieval-Augmented Generation (RAG) helps users prepare for job interviews by generating personalized interview questions and preparation strategies based on their profile, experience level, and target job role.

The platform retrieves role-specific interview questions, industry expectations, behavioral scenarios, and HR guidelines from its knowledge base. Users can upload their resume to receive AI-generated interview questions, model answers, and personalized improvement suggestions.

The solution evaluates both technical and soft skills, provides intelligent feedback, and helps users continuously improve their interview performance and confidence. IBM Granite AI is used to deliver accurate, context-aware, and scalable interview preparation.

Technology Requirement: IBM Cloud Lite Services with IBM Granite AI.
